THE SURETRAP®
PIGGING SYSTEM

The SureTrap® pigging system locks in solid performance for your operation by delivering superior strength, better value and a wide range of configurations and options. SureTrap® systems are made with oversized barrels for ease in the loading and unloading of pigs. Additionally, the use of eccentric reducers on launchers and concentric reducers on receivers improve the system's pig launching and receiving capabilities. And all connections are sized based on industry best practices and standards to provide a system that will work with any setup.

These systems are also highly configurable, enabling you to place outlets where you want them to save time and space or meet specific operational or code requirements. The launchers and receivers can also be skid-mounted with ancillary valves and piping for ease of installation into a customer's pipeline system.

BENEFITS AND FEATURES

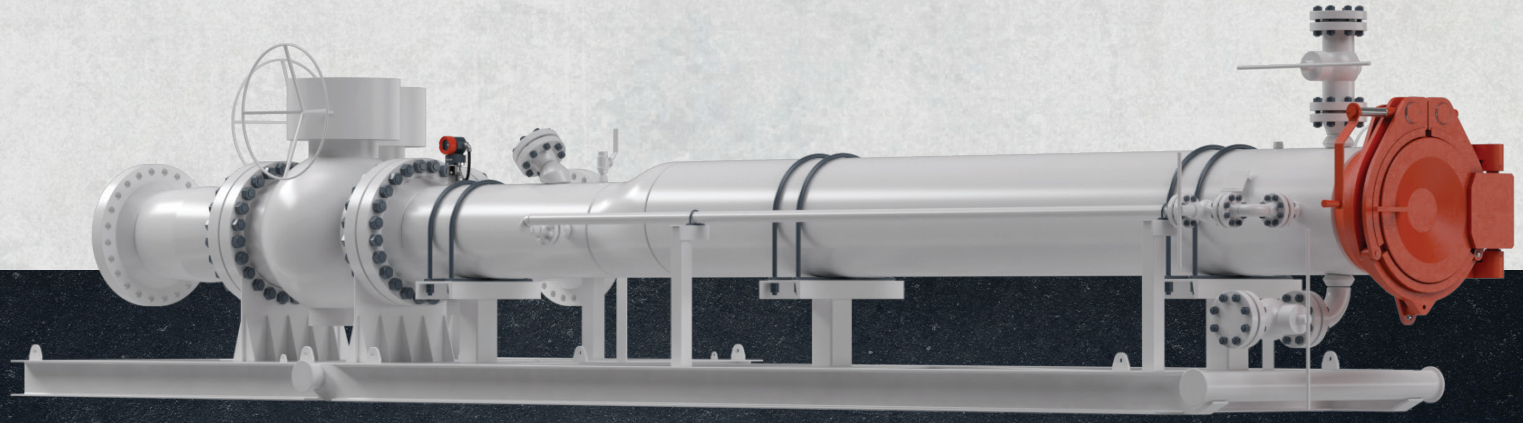
01
OVERSIZED BARRELS
for easier pig handling and loading

02
SURESEAL®
quick-opening closure comes standard on all units

03
STRONG PERFORMANCE
and the best overall package value

04
HIGHLY CUSTOMIZABLE
for almost any operational, spatial or code requirements

05
SKID-MOUNTED
launchers and receivers available



CONNECTIONS
Flange or Weld-end available

NOZZLES
All nozzles for vents, gauges and drains come standard

FINISH
All units are primed and painted

COMPLIANCE
Designed to meet all applicable codes and safety factors

SIZE RANGE
4" to 48" nominal pipe size
